

Erasmus+

Extinct species revivalist

By: Maria Carmen and Dora

Job description

- de-extinction or species revivalism is a process of creating an organism
- extinct species revivalist is a scientist who will try to synthesize a complete strand of DNA as the extinct animal's genome
- genome editing is a group of technologies that give scientists the ability to change an organism's DNA

Academic skills

- strong understanding of biology, chemistry, laboratory equipment and procedures
- knowledge of geography
knowledge of laws
- an education/degree in the field of biology and medicine

Non-academic skills

- ability to work independently or with a team
- willingness to travel to locations to conduct research
- exceptional verbal and written communication skills
- proficiency with computers, especially scientific databases

The future of an extinct species revivalist

- there are already plans about which animals scientists should de-extinct
- one thing is for certain - humanity is rapidly approaching an era where extinction is not permanent
- the goal is to undo the harm we have caused to Earth
